

Listing of Claims:

- 1 1. (Currently Amended) A movable barrier system comprising, a door jamb, a
2 guide track rearwardly offset from said door jamb to form an open space
3 therebetween, a roller mounted door movable along said guide track between
4 a closed position and an open position, ~~and~~ an elongate shield having a first
5 leg attached to said door jamb laterally outwardly of said guide track and
6 having a second leg extending wherein said shield extends rearward from said
7 door jamb and overlies at least a portion of said guide track to cover said open
8 space, and a tab extending from said second leg and contacting said door
9 jamb at a fulcrum, whereby said shield may be pivotally adjusted to selectively
10 position said first leg angularly inwardly and outwardly relative to said guide
11 track to cover said open space.

- 1 2. (Currently Amended) The movable barrier system of claim ~~1~~ 3, wherein the
2 part of said elongate shield overlying said guide track is flexible.

- 1 3. (Currently Amended) A movable barrier system comprising, a door jamb, a
2 guide track rearwardly offset from said door jamb to form an open space
3 therebetween, a roller mounted door movable along said guide track between
4 a closed position and an open position, and an elongate shield attached to
5 said door jamb laterally outwardly of said guide track, wherein said elongate
6 shield extends rearward from said door jamb and overlies at least a portion of
7 said guide track to cover said open space and wherein said elongate shield
8 includes a first leg extending substantially parallel to said door jamb and a
9 second leg extending rearwardly from said first leg, and a tab extending
10 inwardly from said second leg, ~~wherein said tab engages and engaging~~ said
11 guide track.

- 1 4. The movable barrier system of claim 3, wherein said tab is flexible.

1 5. The movable barrier system of claim 4, wherein said elongate shield is
2 constructed entirely of metal.

1 6. The movable barrier system of claim 4, wherein said first leg and said second
2 leg are constructed of metal and said tab is constructed of plastic.

1 7. The movable barrier system of claim 4, wherein said elongate member is
2 constructed entirely of plastic, said first leg and said second leg being a rigid
3 plastic and said tab being a flexible plastic.

1 8. The movable barrier system of claim 4 further comprising, a second tab
2 extending forward from the lateral outward extremity of said first leg.

1 9. The movable barrier system of claim 4, wherein said tab extends rearward as
2 it extends inward from said second leg.

1 10. The movable barrier system of claim 9, wherein said tab has an increasingly
2 reduced thickness as it extends outward from said second leg.

1 11. (Canceled)

1 12. A door system used in connection with an opening defined by a pair of
2 jambs and a laterally extending header connecting the jambs, the door
3 system comprising, a pair of tracks mountable on the jambs, said tracks
4 having a vertical track section running adjacent the jambs, wherein a space
5 is defined between said tracks and the jambs along at least a portion of
6 their length, a door mounted for movement on said tracks and movable
7 between an open position and a closed position, and a shield mounted
8 laterally outward of said tracks and adjacent thereto, said shield extending
9 rearward from the jamb and overlying at least a portion of said tracks along

10 the length of said vertical track section, wherein said overlying portion of
11 said shield contacts said vertical track section along said length thereof, and
12 wherein said shield includes a first leg extending substantially parallel to
13 and attached to the jamb and a second leg extending rearwardly from said
14 first leg, said second leg being spaced laterally outward from said tracks
15 and a tab extending inward from said second leg and contacting said tracks.

1 13. The door system of claim 12, wherein said tab is flexible.

1 14. The door system of claim 13, wherein said tab is constructed of a
2 nonmetallic material.

1 15. The door system of claim 12 further comprising, a second tab extending
2 forward from said first leg, said second tab contacting the jamb at a
3 fulcrum, wherein said first leg is attached to the jamb at a point laterally
4 inwardly of said second tab.

1 16. The door system of claims 15, wherein said first leg is attached to the jamb
2 by an adjustable fastener, whereby said first leg may be pivotally adjusted
3 about said fulcrum to provide a variable pressure contact of said tab against
4 said vertical guide section.

1 17. The door system of claim 15 further comprising, a mounting bracket
2 attachable to the jamb and said track to support said track on the jamb,
3 said first leg of said shield extending laterally outwardly beyond and
4 enclosing said mounting bracket.

1 18. The door system of claim 17, wherein said mounting bracket is L-shaped
2 with said second tab, said first leg, said second leg and said tab
3 substantially enclosing said bracket.

1 19. The door system of claim 17, including a plurality of said mounting
2 brackets attaching said vertical track section to said jamb at different
3 distances therefrom with said tab contacting the vertical track section
4 throughout the length thereof.

1 20. The door system of claim 12, wherein said shield is of uniform cross-
 sectional configuration along its length.

1 21. (Canceled)

1 22. (Canceled)

1 23. (Canceled)

1 24. (Canceled)

1 25. (New) A movable barrier system according to claim 1, wherein said first leg
2 is attached to said door jamb at a point laterally inwardly of said tab by an
3 adjustable fastener.

1 26. (New) The movable barrier system according to claim 25 further
2 comprising, a mounting bracket attaching said guide track to said door
3 jamb, said first leg of said shield extending laterally outwardly beyond and
4 enclosing said mounting bracket.
